01 Executive Summary

Rento is a mobile app for landlords who let out commercial shops and residential rooms. It lets a landlord onboard a shop together with its tenant and rental terms in a single guided flow; track rooms, tenants, and rental agreements; record electricity-meter-based utility bills against a configurable rate; collect rent and bill payments; formally close out a shop when a tenancy ends; and monitor the portfolio through a summary dashboard.

This document specifies the business requirements behind that product: the modules a landlord works in, the data each one manages, the rules that govern it, and the flows a landlord follows end to end. It is organized so a business stakeholder, product manager, developer, or QA engineer can understand what the application is meant to do without reading its source code.

core business entities

02 Business Context & Objectives

Why Rento exists and what it lets a landlord accomplish.

A landlord who rents out multiple shops or rooms today tracks tenants, lease terms, electricity meter readings, and rent collection manually, often across paper records and spreadsheets. Rento consolidates this into a single mobile app that lets a landlord, from one place:

- Onboard a new shop together with its occupying tenant and the commercial terms of the rental in a single guided flow.
- See at a glance which shops have expired agreements or unpaid rent.
- Record electricity consumption per billing period and calculate a bill from a configurable per-unit rate.
- Collect rent and utility payments by cash or online, and keep a payment history.
- Formally close out a shop — capturing deposit return, closure date, and supporting documents — when a tenancy ends.
- Monitor portfolio-level metrics — total revenue, unpaid rent, open vs. closed shops, expired agreements — from a dashboard.

03 Scope & Out of Scope

In scope

- Landlord-facing mobile app (Android + iOS)
- Shop lifecycle: create, view, edit, close
- Room lifecycle: create, view, edit
- Tenant records linked to a shop/room
- Rental agreement creation and history
- Electric bill entry and a global service-rate configuration
- Rent/bill payment capture and payment history
- Portfolio dashboard with summary metrics
- Account screens: login, sign-up, OTP verification, password recovery, profile,

Out of scope

- A tenant-facing login or app — tenants are records, not app users
- Multi-landlord or staff accounts with role-based permissions
- Online payment gateway integration
- Push, SMS, or email notification delivery
- Multi-language / localization support
- Web or desktop clients
- Backend service, database, and hosting infrastructure — defined separately from this app

04 Stakeholders & User Roles

Rento is built around a single user persona: the landlord. Tenants are managed as records, not as accounts.

Role	Responsibilities	App access
Landlord / Property Owner	Adds and manages shops and rooms, tenants, agreements, billing, and payments; reviews the portfolio dashboard.	Full access to every module.
Tenant	Occupies a shop or room under an agreement; contact and identity details are recorded against the shop/room they occupy.	None — no tenant-facing surface.

Role & Permission Matrix

Module	View	Create	Edit	Close / Delete
Shops	✓	✓	✓	✓
Rooms	✓	✓	✓	✓
Tenants	✓	Via shop onboarding	—	—
Agreements	✓	✓	—	—
Bills / Service Rate	✓	✓	—	—
Payments	✓	✓	—	—
Profile / Settings	✓	—	✓	Logout

05 System Architecture Overview

A single React Native mobile application backed by a REST-style API layer.

Platform stack

Framework

React Native 0.75.1, React 18.3.1

Navigation

Stack + bottom-tab navigation across four navigators

UI kit

Material Design

Design conventions

- A single shared color, spacing, and typography system used across all screens.
- Responsive sizing scaled against a common guideline width for consistency across devices.
- Platform-idiomatic touch feedback (ripple on Android, opacity on iOS).
- A consistent empty-state message ("No Data

UI kit	Material-style components: search, checkboxes, radio buttons, switches
Form controls	Dropdown pickers, date/time pickers, OTP input, step indicator
State management	Centralized app state (session, profile, shop/room lists)
Network layer	A single HTTP client instance shared across the app
Persistence	Local secure storage for the session token

- Found") across every list screen.
- Keyboard-aware scrolling on every form screen.

Navigation Architecture

The app opens on Login and, once authenticated, presents a four-tab main experience — Home, Shop, History, and Settings — each backed by its own stack of screens.

06 Module Overview

Nine functional modules group the app's 28 screens. Each is detailed in its own section below.

#	Module	Screens
7	Authentication & Session	Login, Sign Up, OTP Verification, Forgot Password
8	Account & Settings	Edit Profile, Settings
9	Dashboard	Home
10	Shop Management	Shop List, Add Shop (3 steps), Edit Shop, Shop Details (4 tabs), Close Shop, Shop Search
11	Room Management	Room Add, Room Edit, Room Details

11	Room Management	Rooms, Add Room, Edit Room
12	Tenant Management	Tenants, Tenant Details
13	Agreement Management	Agreements, New Agreement
14	Billing Configuration	Service Rate, Add Electric Bill
15	Payments & History	Pay Now, Payment History, History, Confirmation

07 Module: Authentication & Session

Lets a landlord register, sign in, recover a forgotten password, and verify identity via OTP.

Screen	Purpose
Login	Sign in with email and password.
Sign Up	Register a new landlord account.
OTP Verification	Verify identity with a 4-digit one-time code, with a resend cooldown.
Forgot Password	Request a password reset via a registered email address.

Business rules

- A landlord signs up with name, email, phone, and password.
- Login validates credentials and issues a session that keeps the landlord signed in across app launches.
- Password recovery sends a one-time code to the account email; the OTP screen verifies it before a new password can be set.
- A resend cooldown of approximately 75 seconds applies before a new OTP code can be requested.
- An unauthenticated user can only reach Login, Sign Up, Forgot Password, and OTP Verification — every other screen requires an active session.

08 Module: Account & Settings

Lets a landlord manage their profile and reach every other settings-adjacent module from one menu.

Screen	Purpose
Settings	Menu hub: profile, tenants, service rate, rooms, notifications, active devices, logout.
Edit Profile	Edit name, email, phone number, and profile photo.

Business rules

- Settings routes to Edit Profile, Tenants, Service Rate, and Rooms.

- Logging out asks for confirmation, then ends the session and returns the landlord to Login.
- Notifications can be toggled on or off, and a list of active devices can be reviewed, from Settings.
- A profile photo can be uploaded or replaced from Edit Profile.

09 Module: Dashboard

Gives the landlord a portfolio-level summary the moment they open the app.

Screen	Purpose
Home	Summary metrics, plus recently expired agreements and recent payments.

Metrics shown

Total Users	Total Revenue	Unpaid Room Rent
Opened Shops	Closed Shops	Expired Agreements

Below the metrics, two lists show the five most recently expired agreements and the five most recent payments, each linking through to the relevant shop's details. When either list has no data, a "No Data Found" message is shown in its place.

10 Module: Shop Management

The central module: create, browse, view, edit, and close a shop — a rentable commercial unit let out to a tenant under a rental agreement.

Screen	Purpose
Shop List	Browse all shops; entry point to search and to add a new shop.
Add Shop	A 3-step onboarding wizard for a new shop.
↳ Step 1 — Shop	Shop identity: email, type, description, medium, logo.
↳ Step 2 — Tenant	Occupant details: name, father's name, address, contact numbers, supporting document.
↳ Step 3 — Rental	Agreement terms: period, dates, rent, deposit, late charges, electrical billing flag.
Edit Shop	Edit a shop's identity fields.
Shop Details	Information / Payment / Agreement / Settings tabs for one shop.
Close Shop	Formal closure: close date, deposit return, remark, supporting attachment.
Shop Search	Search and browse shops by name or owner.

The Add Shop wizard

A landlord completes all three steps in one continuous flow; the shop, its tenant, and its initial agreement are created together at the end of Step 3.

Shop Details — the four tabs

Information

Agreement terms, tenant details, and an image gallery for the shop. A "Closed Shop Information" panel — return deposit, close date, remark, document — is shown once a shop has been closed.

Agreement

Lists the shop's past and current rental agreements, with a "+ New Agreement" action to record a renewal or a new lease term.

Payment

Bills filtered by All / Room / Electrical. Electric-bill entries additionally show previous and current meter readings. Each bill has its own "Pay Now" action, and a new electric bill can be added from here.

Settings

Edit Shop, a Notifications toggle, an Electrical-billing toggle, and confirmation-gated Close Shop and Delete Shop actions.

11 Module: Room Management

Screen	Purpose
Rooms	List rooms, filter by Occupied / Vacant, and delete a room.
Add Room	Create a room: number, size, supporting attachment.
Edit Room	Edit a room's number, size, occupying company/owner, and photo.

Business rules

- Rooms can be filtered to show All, Occupied only, or Vacant only.
- A room's number must be unique within the property.
- Deleting a room requires an explicit "Are you sure?" confirmation.

12 Module: Tenant Management

Screen	Purpose
Tenants	List tenants, filterable by Active / Inactive status.
Tenant Details	A tenant's full profile: name, father's name, address, contact numbers, status, and documents.

Business rules

- A tenant's status is Active while occupying a shop or room under a current agreement, and Inactive otherwise.
- Tenant records are created as part of the Add Shop wizard, alongside the shop and its agreement.

13 Module: Agreement Management

Screen	Purpose
Agreements	List agreements with their expiry date.
New Agreement	Create an agreement: duration, start and end dates, amount, remark, attachment.

Business rules

- An agreement's end date must fall after its start date, and each date is selected independently.
- An agreement's start date can be backdated by up to 7 days from today, with no restriction on how far into the future it can be dated.
- An agreement transitions to Expired once its end date passes, and back to Active when it is renewed.

14 Module: Billing Configuration

Screen	Purpose
Service Rate	Configure the global Electric Rate and Late Rent Charge.
Add Electric Bill	Record a billing-period electric bill from meter readings.

Business rules

$$\text{Amount} = (\text{Current Unit} - \text{Previous Unit}) \times \text{Rate} + \text{Extra Amount}$$

- The current meter reading must not be lower than the previous reading.
- The per-unit electric rate is configured once, in Service Rate, and applied to every electric bill.
- The Late Rent Charge configured in Service Rate is applied as a surcharge to overdue rent.

15 Module: Payments & History

Screen	Purpose
Pay Now	Collect a rent or bill payment: amount, method (Cash or Online), remark, attachment.
Payment History	List of completed payments.
History	Combined activity log across bills, agreements, and payments.
Confirmation	Payment receipt: amount, status, transaction ID, timestamp.

Business rules

- A payment is recorded against a specific bill and moves that bill from Unpaid to Paid.
- Every payment is issued a unique transaction ID and timestamp, shown on its confirmation receipt.
- Payment method is either Cash or Online, chosen at the time of payment.

16 User Journeys

Key end-to-end flows, from trigger through to result.

Sign in

Trigger	Landlord opens the app.
Precondition	An account already exists.
Action	Enters email and password, taps "Log In".
Validation	Both fields are required; credentials are checked against the account on record.
Result	A session is created and the landlord lands on the Home dashboard.
Exception	Invalid credentials show an error and the landlord remains on Login.

Onboard a new shop

Trigger	Landlord taps the "+" action on the Shop List.
Action	Completes Step 1 (Shop info), Step 2 (Tenant info), Step 3 (Rental terms).
Result	The shop is added to the landlord's portfolio and is visible to tenants.

Rule	The shop record, its occupying tenant, and its initial agreement are created together as one transaction.
Result	The new shop appears in the Shop List with an Active agreement status.

Record an electric bill and collect payment

Trigger	Landlord opens a shop's Payment tab and taps "Add Electrical Bill".
Action	Enters the billing period, previous and current meter readings, and any extra amount.
Rule	$\text{Amount} = (\text{Current} - \text{Previous}) \times \text{Rate} + \text{Extra}$, using the configured Electric Rate.
Result	The bill appears on the Payment tab as Unpaid until settled via Pay Now.

Close a shop

Trigger	Landlord opens Shop Details → Settings → "Close Shop".
Action	Confirms intent, then enters close date, deposit-return amount, remark, and attachment.
Rule	Closing captures a settlement (deposit return) distinct from routine rent/bill payments.
Result	The shop's status becomes Closed and its closure details appear on the Information tab.

17 Screen Inventory

All 28 screens, cross-referenced to their module.

Screen	Module
Login	Authentication
Sign Up	Authentication
OTP Verification	Authentication
Forgot Password	Authentication
Settings	Account
Edit Profile	Account
Home	Dashboard
Shop List	Shop
Add Shop (Shop / Tenant / Rental steps)	Shop
Edit Shop	Shop

Shop Details (Information / Payment / Agreement / Settings)	Shop
Close Shop	Shop
Shop Search	Shop
Rooms	Room
Add Room	Room
Edit Room	Room
Tenants	Tenant
Tenant Details	Tenant
Agreements	Agreement
New Agreement	Agreement
Service Rate	Billing
Add Electric Bill	Billing
Pay Now	Payment
Payment History	Payment
History	Payment
Confirmation	Payment

18 Business Rules

The rules governing the application's behavior, numbered for traceability.

- R01

A modal dialog dims the background by 20% opacity by default.
- R02

A dropdown selection is only committed when a non-empty value is chosen; clearing a dropdown does not commit a change.
- R03

A primary action button defaults to the app's brand accent color unless a screen specifies otherwise.
- R04

A button showing a loading state is disabled for the duration of that action, preventing duplicate submission.
- R05

A date or time picker does not allow selecting a date before the current moment, unless the screen explicitly allows backdating.

R06	New Agreement and Add Electric Bill allow backdating up to 7 days, with no upper limit on future dates.
R07	An agreement's start and end dates are selected independently, and the end date must fall after the start date.
R08	Electric bill amount is calculated as $(\text{Current Unit} - \text{Previous Unit}) \times \text{Rate} + \text{Extra Amount}$.
R09	The current meter reading cannot be lower than the previous reading.
R10	The configured Late Rent Charge is applied as a surcharge once rent becomes overdue.
R11	Every list screen shows a "No Data Found" message when its underlying data is empty.
R12	Shop Search filters the shop list by name or owner as the search text is entered.
R13	Rooms can be filtered by Occupied/Vacant, and Tenants by Active/Inactive.
R14	Destructive actions — Logout, Close Shop, Delete Shop, Delete Room — require an explicit "Are you sure?" confirmation before proceeding.
R15	Deleting a shop or room removes that specific record and is scoped to the item selected.
R16	Selecting a room, tenant, or shop from a list opens that record's detail or edit screen, pre-populated with its data.
R17	Login requires a registered email and matching password.
R18	Logging out clears the stored session so the landlord must sign in again.
R19	OTP verification checks the entered code against the one issued, and enforces a resend cooldown of approximately 75 seconds.
R20	A new landlord can self-register for an account from the Sign Up screen.
R21	The "Closed Shop Information" panel is shown on the Information tab only once a shop's status is Closed.
R22	Submitting a payment validates the amount, records the transaction, and carries its details through to the confirmation receipt.

19 Validation Rules

Field	Examples	Rule
category		

Category		
Contact fields	Email, Phone, Alternate Phone	Format-validated; phone numbers are digit-only and length-bound
Monetary fields	Rent Amount, Security Deposit, Late Charges, Amount, Electric Rate	Positive numeric, currency-formatted
Meter readings	Previous Unit, Current Unit	Numeric; Current must be $\geq$ Previous
Date ranges	Start/End of Agreement, Billing Duration	End date must fall after start date; agreements for a shop must not overlap
Identifiers	Room Number	Must be unique per property
Required text	Name, Shop Type, Description, Remark	Must be non-empty before the form can be submitted

20 Status & State Models

Shop lifecycle

Payment / bill lifecycle

Entity	Status field	Values
Shop — Agreement status	status	Active, Expired
Shop — Payment status	status	Paid, Unpaid
Shop — Electrical billing	flag	On, Off
Room — Occupancy	status	Occupied, Vacant

Room — Occupancy	status	Occupied, vacant
Tenant — Status	status	Active, Inactive

21 Business Data Model

Shop

email · shop type · description · medium · logo · name · rent/month · category

Agreement

period · start date · end date · rent/month · pay period · security deposit · late charges · electrical flag · status · attachment

Tenant

name · father's name · address · email · phone · alternate phone · status · documents

Room

room number · size · company · owner · photo · attachment

Electric Bill

billing period · previous unit · current unit · rate · extra amount · amount · remark · attachment

Payment

bill type (Room Rent / Electric) · amount · billing period · paid-on date · method (Cash/Online) · remark · attachment

22 Authentication & Authorization

Concern	Requirement
Credential validation	Email and password checked against the registered account on login.
Session issuance & storage	A session token is issued on successful login and stored securely on-device.
Protected routes	Every screen beyond Login/Sign Up/Forgot Password/OTP requires an active session.
Token attachment	The session token is attached to every request made on the landlord's behalf.
Session expiry	An expired or invalid session returns the landlord to Login.
Logout	Clears the stored session and any cached account data.
Roles	A single "Landlord" role; no differentiated permission levels.

23 Notifications

Trigger	Recipient	Purpose
Agreement approaching expiry	Landlord	Prompt renewal before a lease lapses.
Rent or bill overdue	Landlord	Flag unpaid rent/bills needing collection.
Payment received	Landlord	Confirm a payment has been recorded.
OTP issued	Landlord	Deliver the one-time code for login/password recovery.

Notification preferences can be turned on or off per landlord from Settings.

24 File & Media Management

Context	Purpose
Shop logo	Uploaded when creating or editing a shop.
Tenant document	Identity/KYC document captured during shop onboarding.
Profile photo	Uploaded or replaced from Edit Profile.
Shop gallery	Images added to and removed from a shop's Information tab.

Agreement, room, bill, and payment attachments	Supporting documents attached at the point of creation.
Payment receipt	Viewable from the Confirmation screen after a payment.

25 **Search, Filter & Sort**

Screen	Capability
Shop Search	Search shops by name or owner
Rooms	Filter by All / Occupied / Vacant
Tenants	Filter by All / Active / Inactive
Shop Details → Payment	Filter by All / Room / Electrical

26 **Reports & Dashboards**

Metric	Definition
Total Users	Count of registered landlord accounts
Total Revenue	Sum of all payments recorded to date
Unpaid Room Rent	Count of room-rent bills currently in Unpaid status
Opened Shops	Count of shops not currently in Closed status
Closed Shops	Count of shops in Closed status
Expired Agreements	Count of agreements in Expired status with no active renewal

27 **API & Integration Requirements**

Method & path	Purpose
POST /auth/login	Authenticate, issue session token
POST /auth/signup	Register a landlord account
POST /auth/otp/send · /verify	Send and verify OTP

POST /auth/password/reset	Set a new password after OTP verification
GET/PUT /profile	Load and save the landlord profile
GET /shops · POST /shops	List and create shops
GET/PUT /shops/:id	Load and edit a shop
POST /shops/:id/close	Record a shop closure
DELETE /shops/:id	Delete a shop
GET /rooms · POST /rooms · GET/PUT/DELETE /rooms/:id	Room CRUD
GET /tenants · GET /tenants/:id	Tenant lookup (created via shop onboarding)
GET /shops/:id/agreements · POST /agreements	List and create agreements
GET /shops/:id/bills · POST /bills/electric	List and record bills
GET/PUT /service-rate	Global electric rate / late charge configuration
POST /payments · GET /payments	Record and list payments
GET /dashboard/summary	Metric values for the Home dashboard

28 Third-Party Integrations

Integration	Purpose
Date & time picker	Selecting agreement and billing dates
OTP input	Capturing the one-time verification code
Step indicator	Progress display for the Add Shop wizard
Image/document picker	Logos, photos, and supporting attachments across the app

29 Error & Exception Handling

Scenario	System response
Invalid login credentials	Inline error message; landlord remains on Login

Empty list data	"No Data Found" message shown in place of the list
Network failure during a save/submit action	Error message with the option to retry
Invalid field input	Inline validation message next to the offending field
Session expiry mid-use	Redirect to Login with a re-authentication prompt

30 Non-Functional Requirements

Area	Requirement
Responsive sizing	Consistent layout scaling across device sizes
Platform-idiomatic feedback	Native-feeling touch feedback on both Android and iOS
Safe-area handling	Content respects device notches and system bars
Theming consistency	A single shared color, spacing, and typography system app-wide
Keyboard handling	Forms scroll to keep the active field visible above the keyboard

31 Security Requirements

Area	Requirement
Session tokens	Stored in secure, encrypted on-device storage
Tenant PII	Names, addresses, phone numbers, and identity documents are transmitted and stored encrypted
Payment data	Amounts and payment records are protected in transit and at rest
API access	Every request beyond authentication requires a valid session token

32 Configuration & Environment

Setting	Purpose
API base URL	Points the app at the correct backend environment
App display name & identifiers	Android/iOS app identity and branding

33

Traceability Matrix

Req. ID	Requirement	Module	Screen(s)	Data entity
REQ-01	Landlord authentication	Auth	Login	Landlord
REQ-02	Landlord self-registration	Auth	Sign Up	Landlord
REQ-03	Password recovery via OTP	Auth	Forgot Password, OTP Verification	Landlord
REQ-04	Profile management	Account	Edit Profile	Landlord
REQ-05	Portfolio dashboard	Dashboard	Home	Shop, Payment, Agreement
REQ-06	Shop creation wizard	Shop	Add Shop (3 steps)	Shop, Tenant, Agreement
REQ-07	Shop detail & sub-tabs	Shop	Shop Details (4 tabs)	Shop, Agreement, Payment
REQ-08	Shop closure with settlement	Shop	Close Shop, Settings tab	Shop
REQ-09	Shop search	Shop	Shop Search	Shop
REQ-10	Room management	Room	Rooms, Add Room, Edit Room	Room
REQ-11	Tenant directory	Tenant	Tenants, Tenant Details	Tenant
REQ-12	Agreement history & creation	Agreement	Agreements, New Agreement	Agreement
REQ-13	Electric bill calculation	Billing	Add Electric Bill	Electric Bill
REQ-14	Global rate configuration	Billing	Service Rate	Service Rate Config

REQ-15	Payment capture & receipt	Payment	Pay Now, Confirmation	Payment
REQ-16	Payment history	Payment	Payment History, History	Payment

34 Assumptions

- Currency is Indian Rupees.
- Target platforms are Android and iOS only.
- The product is single-tenant-per-landlord-account.
- English is the only supported language.
- "Landlord" is the sole user persona; tenants are data subjects, not app users.

35 Open Questions

1. What should the History screen show, distinct from Payment History?
2. What are the intended "medium" options in the Add Shop wizard's Step 1?
3. Are Shop and Room the same underlying rentable-unit entity, or genuinely separate types?
4. Should agreements support overlap checks — can two active agreements exist for one shop at once?
5. Is a tenant-facing app or portal planned for a future phase?
6. Should Delete Shop / Delete Room be recoverable (soft delete), and what happens to dependent agreements, bills, and payments?

36 Glossary

Shop	A rentable commercial unit a landlord lets out, tracked with identity info, an occupying tenant, and rental terms.
Room	A separately-modeled rentable unit for residential letting.
Agreement	A lease/rental contract record for a shop — period, dates, rent, deposit, late-charge terms, and status.
Tenant	The occupant of a shop or room; a data record, not an app user.
Electric Bill	A billing-period record of electricity consumption and its calculated cost.
Service Rate	Landlord-configured defaults: per-unit electric rate and late-rent-charge amount.
OTP	One-time password used for identity/password-recovery verification.
KPI	Key Performance Indicator — the summary metrics on the Home dashboard.

37 Appendix — Methodology

This document was produced from a complete review of the application's 28 screens, its navigation structure, and its shared component library, cross-referencing field names, flow order, and screen structure across every module to reconstruct the business requirements they express.
